Supporting text

Supplementary figures S1 to S2

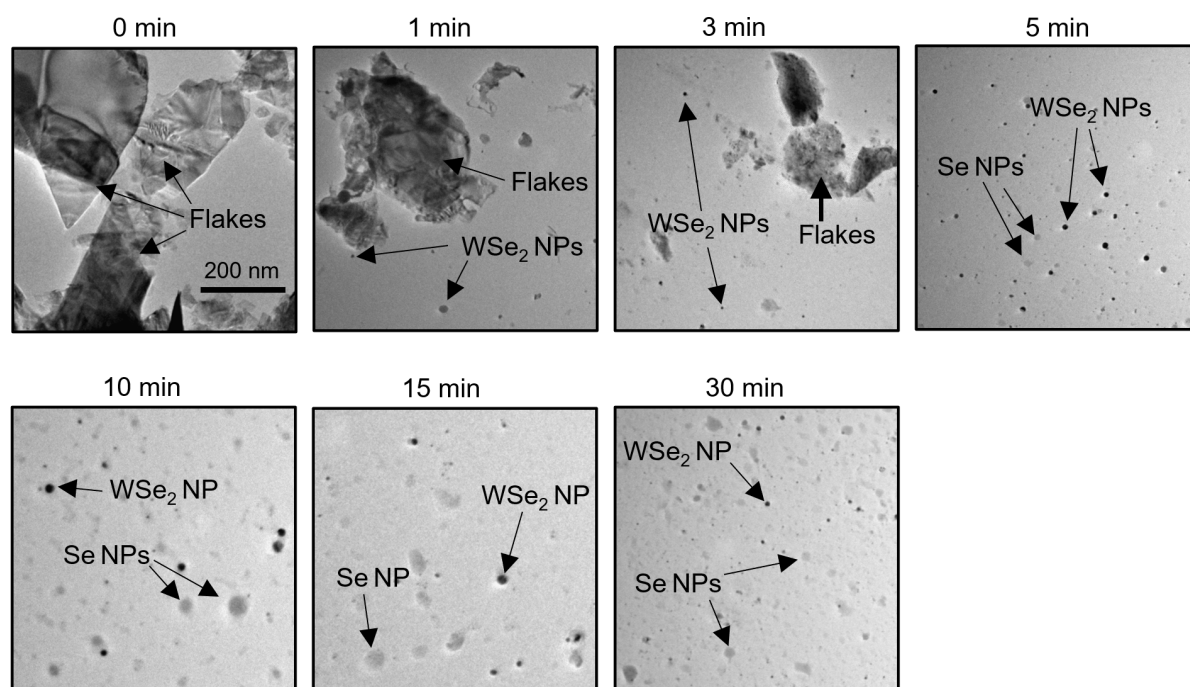

Supplementary Note S1.

Supplementary Figure S1. SEM photographs of laser-induced periodic structures (LIPS), appeared after multiple passes of WSe₂ crystal surface by femtosecond pulses during ablation experiments; a) Elongated wire-like pattern; b) A magnified area from a), showing the underformed wires pattern; c) Another surface area with low-spatial frequency wavy grooves and high-spatial frequency spherical-like beads.

Supplementary Note S2.

Fragmentation time

Supplementary Figure S2. TEM photographs of colloids after different time of femtosecond laser fragmentation. At times 5 min and more, Se NPs appear.
